- DBMS

PROJECTS

Carnetic music learner 🔗 | Python-streamlit,pandas,CSS

2025

- A platform designed to help users to learn and explore Carnatic music.
- Built with Python's streamlit library and pandas library for data storage.
- Utilizes Pandas to identify 72-Melakartha raga scales based on user input and also for identifying the Janaka raga of most popular janya ragas.
- Also contains the tutorial for learners who want start learn music from scratch.

CODE VERSE 🔗 | HTML,CSS,Javascript,React-js,Node -js

- An online platform designed for students to learn various skills such as cloud computing, AI/ML, programming languages, and more. .
- A group project built with HTML, CSS, and JavaScript for the front-end, using Node.js for the back-end and React for building a dynamic user interface.
- Provides a wide range of learning resources with mentors to help students acquire technical skills in a structured and engaging manner.

Google text translator 🔗 | Python

- Developed a GUI-based Language Translator using Python's Tkinter and ttkbootstrap for a modern and user-friendly interface.
- Integrated Google Translate API to enable real-time text translation between multiple languages.
- Implemented language selection using ComboBox widgets, allowing users to choose source and target languages dynamically.
